

Mathematics

Zack Dell

Submitted by Daniel Giles-Bullicer

Zack Dell demonstrates excellent mathematical scholarship. His curiosity drives him to explore ideas more deeply; his creativity allows him to construct new insights and perspectives from seemingly unrelated ideas. With a rare clarity of thought and exposition, he has performed at a superior level not only in our 200-level courses, but also in independent study of advanced mathematical topics. Zack served as president of the Math Club, which thrived under his leadership and enthusiasm. The SBCC math department is grateful to have worked with him and is excited for his future academic adventures.
